500 SERIES PARALLEL EQUALIZER

OPERATIONAL OVERVIEW

Behold the Clariphonic Dual-Channel Parallel Equalizer from Kush Audio, a fiendishly clever approach to equalization that was designed from the ground up to give you the kind of air, clarity, and presence previously found only in very expensive analog equalizers, the kind that are often old and difficult to find.

With two high-shelves running in parallel on each channel, and your choice of 6 unusual and carefully selected corner frequencies covering everything from the mids to the supersonics, there is no limit to the types of sweet high end the Clariphonic can produce.

The internal parallel signal paths produce a form of additive-only high frequency equalization that is at once holographic, transparent, and virtually phaseless. You get effortless, natural high end for days.

PRESENCE / SHEEN SELECT

Lower Clarity Filters
Sheen rises to 8k
Presence rises to 4k

CLARITY GAIN

Turns the Clarity filter up
Max Boost is 14-16dB,
depending on filter

FOCUS GAIN

Turns the Focus filter up
Max Boost is 16dB

SHIMMER / SILK SELECT

Upper Clarity Filters
Silk climbs to 34k
Shimmer climbs to 18k

CLARITY BYPASS

3-position multi-function switch
Center: Bypass Clarity Filter
Up: Routes signal to Shimmer or Silk
Down: Routes signal to Presence or Sheen

LIFT / OPEN SELECT

3-position multi-function switch
Center: Bypass Focus Filter
Up: Routes Signal to Lift (800)
Down: Routes Signal to Open (3k)
